Used n8n + ChatGPT + Reddit to Make $2.4K in 7 Days — Here’s How

My side blog— fully automated system (Game Changer)

Last week, I made **$2,439** in 7 days. And I didn’t run ads. Didn’t build a product. Didn’t even write the blog posts myself.

I just stitched together **n8n**, **ChatGPT**, and **Reddit**, and let them do their thing.

No BS. No hacks.
Just a simple, repeatable system that *runs in the*

background. Here’s how I did it — step by step.

No Medium Members: Click Hear

Tools I Used

n8n Screenshort

These six tools were the entire stack:

- **n8n**: For automation flows
- **Reddit RSS**: To discover trending content
- **ChatGPT**: To generate articles, titles & image prompts •

DALL·E: For AI-generated images

- **Notion**: To store media
- **WordPress**: To publish the final post
- **Ezoic + Google AdSense**: For monetization

Sounds like a lot?

It's not — once it's automated.

Step 1: Use Reddit as a Trend Machine

I started with **subreddit RSS feeds**.
Each niche subreddit is a goldmine of what's *already*

working. For me, it was:

- r/technology
- r/futurology
- r/science
- r/interestingasfuck

Whenever a hot post showed up, n8n would catch it through RSS.

Step 2: Automate Everything with n8n

This was the magic sauce.

My **n8n flow** looked like this:

1. Listen to Reddit RSS
2. Extract post title + summary
3. Send to **ChatGPT API** with custom prompts:

```
You are a content writer helping me create a blog post for
my  WordPress site.

Here’s your task:
Using the following Reddit post as inspiration, write a full
blog  article. The tone should be friendly, personal, and
natural — like  you're talking to a curious friend over coffee.

---
►► Reddit Post:
{Insert Reddit title + short description here}
---

►► Goal:
```

```
Turn this into an engaging blog post that would perform well
on  Medium or similar platforms. Add a catchy title and
optional  subheading.

⬆️ Write using these style rules:

* **Use clear, everyday language:** Simple words. Short
sentences.  Write like a human, not a robot.
* **No clichés or hype words:** Avoid terms like “game-changer”
or  “revolutionize.” Just be real.
* **Be direct:** Get to the point fast. Cut the fluff. * **Use a
natural voice:** It's okay to start sentences with "But"  or
"So." Write like you speak.
* **Focus on value:** Don’t oversell. Instead, explain the
benefit  honestly.
* **Be human:** Don’t fake excitement. Just share
what’s  interesting, surprising, or useful.
* **Light structure:** Use short paragraphs, subheadings, and
maybe  a few bullet points.
* **Emotion + story welcome:** Share small stories or examples if
it  helps explain the point.
* **Title must be catchy and relevant.**

⛔ Avoid:
- Robotic or overly formal tone
- Long, dense paragraphs
- Generic summaries or filler content

✅ Do:
- Write in first person if it makes sense
- Use contractions ("I'm", "it's", etc.)
- Keep it scannable and interesting

Now go ahead and write the blog post. Start with a headline,
then  dive right into the story or explanation.
```

4. ChatGPT sends back a **full blog post**, plus **image prompt ideas** All of that — automated.

Step 3: AI Image Generation

Using the image prompt from ChatGPT, I passed it to **DALL·E**.

The images were stunning — and unique.
Exactly what Google Images won't give you.

Once generated, I saved the image into **Notion** using a Notion API node in n8n.
That way, I could review and organize them later.

Step 4: Auto-Publish to WordPress

The final step?

Push the content (blog + image) straight to

WordPress. n8n handled everything:

- Title
- Body
- Featured image
- Tags
- Scheduling

It was like having a team of 3 writers + 1 designer… working 24/7.

Step 5: Monetize with Ezoic

I signed up for **Ezoic** instead of just AdSense.
Why? **Higher RPMs** (revenue per thousand views).

Each post got picked up by Google within hours.
Thanks to Reddit-based trends, the traffic came

fast. By last Day 7, I had:

- 87 published posts
- ~102K sessions
- **$2,439.57 in revenue**

Mostly from Ezoic, with a bit of AdSense spillover.

Mistakes I Made (So You Don't)

- My first blog posts sounded robotic — until I **tweaked the prompt** for tone

• Forgot to **optimize images** — site load was painfully slow •

Skipped meta descriptions at first — SEO traffic suffered

Most of my Website traffic actually came from Google Discover — which was a nice surprise.
If you like this method, give it a shot. You can even use the same automation for your **Substack** or hey, even **Medium too ►►**.
(Not Sure For Medium)
